

PATHWAYS AND CITING OF ARTIFICIAL INTELLIGENCE

Students in Loudoun County Public Schools (LCPS) should have opportunities to practice using Generative Artificial Intelligence (Gen AI) to enhance their learning. Teachers at all levels can model the use of Gen AI to educate students about its applications. While teachers should not require students to use Gen AI for assignments, they can find opportunities to demonstrate Gen AI in various ways to help students understand its potential and how to use it responsibly.

A. Pathways for using Gen AI. When a teacher asks a student to create original work, students need to know if and how they can use Gen AI to support their thinking. Tiers have been established to help determine the level of Gen AI that can be used for schoolwork. The teacher will help decide which tier applies to an assignment.

1. No Gen AI. The teacher wants to get a clear picture of what a student knows and can do without outside help. A student may not use Gen AI on these assignments.

2. Gen AI as Coach. A student can use Gen AI to get feedback and refine their original thinking. On these assignments, a student may ask Gen AI to identify ways they can improve their work. The work that is created must be their own.

3. Gen AI as Collaborator. A student can work with Gen AI as an equal partner, similar to working with an in-class partner. On these assignments, use AI-generated content as a starting point for ideas, use Gen AI to ask it to make revisions, and use it to help refine and revise their work.

4. Gen AI as an Essential Tool. A student will need to use Gen AI to complete their work. On these assignments, students will rely on the processing power of AI to help analyze data, look for trends and patterns, or generate original ideas.

B. Citing Gen AI. When a student uses Gen AI to help create a project, the student must cite it as a source or describe how it was used. Failing to cite or disclose the use of Gen AI could result in an Academic Integrity violation.

1. How to Cite Gen AI. If a student uses Gen AI to find information that is incorporated into the work, it must be cited like any other source. Students can find more information about how to cite AI in [MLA](#) or [APA](#) style online.

2. How to Disclose Use of Gen AI. If a student uses Gen AI to help improve or create work, it must be disclosed to the teacher. The teacher will provide more information about how to disclose the use of Gen AI. Teachers may ask to add a statement at the top of the assignment and/or add a comment on a Schoology submission. Example statements that may be used to share how Gen AI was used:

PATHWAYS AND CITING OF ARTIFICIAL INTELLIGENCE

- a. I used Gen AI to get feedback to help improve my final project.
- b. I used Gen AI as a partner to help develop ideas and create my project.
- c. I used Gen AI as an essential tool to develop my project.

3. Sharing Your Chat and Gen AI Responses. The teacher may request the student to share a copy of any prompts used or responses received from Gen AI during the course of the work.
