

PRIVACY AND DATA PROTECTION WHEN USING ARTIFICIAL INTELLIGENCE

Loudoun County Public Schools (LCPS) is committed to safeguarding student data and protecting sensitive information. When using generative Artificial Intelligence (Gen AI), teachers, staff, and students must be mindful of any potential risk of exposing student or division information.

A. Authorized Gen AI Tools. Staff and students should only use supported tools that are provided by the division. These tools have protections in place to ensure that data entered by users is not used to train the underlying models or shared with third parties. Refer to the Ed Tech Catalog to determine which Gen AI tools are provided for staff or students.

B. Unapproved Gen AI Tools. LCPS staff and students should only use LCPS-authorized supported Gen AI tools. Do not use consumer versions (free or paid) of any Gen AI tool for LCPS purposes. Examples of these consumer services include OpenAI's ChatGPT, Anthropic's Claude, and personal versions of Microsoft Copilot or Google Gemini. Consumer versions of Gen AI models use data entered by users to continue to train their models, and, therefore, LCPS deems these to be unauthorized Gen AI tools.

C. Student Tools. When students use LCPS approved Gen AI tools, teachers should model how to protect personal information and have discussions with students about how they can safeguard their information if they are exploring Gen AI models.

D. Personally Identifiable Information. Users should avoid inputting any information that could personally identify a student. This includes student names, student identification numbers, birth dates, and other attributes identified in [Policy 8640](#), Disclosure of Student Personally Identifiable Information and Other Educational Records.
