

ADVANCED OR ACCELERATED MATHEMATICS

The Loudoun County School Board adopts a division-wide mathematics policy establishing criteria for enrollment in advanced or accelerated mathematics, for grade levels five through eight as required by [Virginia Code §22.1-207.9](#). For purposes of this policy, advanced or accelerated mathematics is defined as a course one year beyond the student's current grade level.

A. Annual Notification. The parents of each student in grades five through eight are notified annually of the following:

1. The criteria and process for enrollment in advanced or accelerated mathematics, including automatic enrollment and parental opt-out, as set forth in this policy;
2. The importance of middle school mathematics coursework;
3. The impact of middle school mathematics coursework on the high school mathematics coursework sequence; and
4. The mathematics courses available within Loudoun County Public Schools. Accommodations provided in any LCPS classes are also available in these courses.

B. Automatic Enrollment and Option for Parental Opt-Out. Students in grades five through eight who earn a grade-level upper quartile scale score on the end-of-year Standards of Learning mathematics assessments will be automatically enrolled in an advanced or accelerated mathematics course in the next school year. Parents of such a student may opt-out their student from such automatic enrollment.

C. Eligibility for Enrollment. Besides the automatic enrollment option referenced above, students may be eligible for enrollment in an advanced or accelerated mathematics course upon teacher recommendation, parental recommendation, student preference, or student aptitude, as demonstrated through other means of evaluation than the Standards of Learning mathematics assessment, such as grades, other standardized testing, portfolios, or observation.
